

PROCELL PROFESSIONAL BATTERY RANGE

PROCELL INTENSE POWER

Procell intense power is a new battery range engineered to deliver precise pulses of energy while lasting longer in high-drain professional devices.*

High-drain devices require high amounts of current over short periods of time, frequently.

They often operate motors, pumps and other mechanisms that create motion and might come with other energy intensive functions.

PROCELL CONSTANT POWER

Procell constant power is a new battery range specifically engineered to consistent performance while lasting longer in low-drain professional devices.*

Low-drain devices typically use low levels of energy over a long period of time. They may have fewer energy intensive functions and are idle most of the time.

Due to their slow and steady current need they require batteries with high cell capacity and more active material so that they can stay on for long periods of time.
